## $10^{th}$ Maths - Chapter 4

This is Problem-2 from Exercise 4.2

1. John and Jivanti together have 45 marbles. Both of them lost 5 marbles each, and the product of the number of marbles they now have is 124. We would like to find out how many marbles they have to start with.

**Solution:**
Given Data:
Let, the number of marbles John has = x.
Therefore, number of marbles Jivanti has = 45 – x
After losing 5 marbles each,
Number of marbles John has = x – 5
Number of marbles Jivanti has = 45 – x – 5 = 40 – x
Given that the product of their marbles is 124.
This can also be written as: $x^2 - 45x + 324 = 0$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{1}$$
$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{2}$$
$$x = \frac{45 \pm \sqrt{-45^2 - 4 \times 1 \times 324}}{2 \times 1} \tag{3}$$
$$x = \frac{45 + \sqrt{2025 - 1296}}{2} \tag{4}$$
$$x = \frac{45 + \sqrt{729}}{2} \tag{5}$$
$$\tag{6}$$

1st condition

$$x = \frac{45 + 27}{2} \tag{7}$$
$$x = \frac{72}{2} \tag{8}$$
$$x = 36 \tag{9}$$
$$\tag{10}$$

2nd condition

$$x = \frac{45 - 27}{2} \tag{11}$$
$$x = \frac{18}{2} \tag{12}$$
$$x = 9 \tag{13}$$

Hence there roots are x=36 and x=9
