10^{th} Maths - Chapter 4

This is Problem-2 from Exercise 4.2

1. John and Jivanti together have 45 marbles. Both of them lost 5 marbles each, and the product of the number of marbles they now have is 124. We would like to find out how many marbles they have to start with.
   Solution:
   Given Data: $\left(x^2 - 45x + 324 = 0\right)$

This can also be written as:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{1}$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{2}$$

$$x = \frac{45 \pm \sqrt{-45^2 - 4 \times 1 \times 324}}{2 \times 1} \tag{3}$$

$$x = \frac{45 + \sqrt{2025 - 1296}}{2} \tag{4}$$

$$x = \frac{45 + \sqrt{729}}{2} \tag{5}$$

$$1st condition \tag{6}$$

$$x = \frac{45 + 27}{2} \tag{7}$$

$$x = \frac{72}{2} \tag{8}$$

$$x = 36 \tag{9}$$

$$2nd Condition \tag{10}$$

$$x = \frac{45 - 27}{2} \tag{11}$$

$$x = \frac{18}{2} \tag{12}$$

$$x = 9 \tag{13}$$

$$Hence the rerootsare x = 36 and x = 9 \tag{14}$$
