10th Maths - Chapter 7

This is Problem-4 from Exercise 7.2

1. Find the ratio in which the line segment joining the points $(-3, 10)$ and $(6, -8)$ is divided by $(-1, 6)$.

Solution:

Given Data:

$$A = \begin{pmatrix} -3 \\ 10 \end{pmatrix}$$

$$B = \begin{pmatrix} 6 \\ -8 \end{pmatrix}$$

$$C = \begin{pmatrix} -1 \\ 6 \end{pmatrix}$$

To find: ratio dividing them

Now,

$$C = \frac{A + nB}{n + 1} \quad (1)$$

$$C = \frac{1}{1 + n} \times \left(\begin{pmatrix} -3 \\ 10 \end{pmatrix} + n \times \begin{pmatrix} 6 \\ -8 \end{pmatrix} \right) \quad (2)$$

$$= \frac{1}{1 + n} \times \begin{pmatrix} -3 + 6n \\ 10 - 8n \end{pmatrix} \quad (3)$$

By taking x

$$-1 = \frac{-3 + 6n}{1 + n} \quad (4)$$

$$\implies -3 + 6n = -1 - n \quad (5)$$

$$\implies 6n + n = -1 + 3 \quad (6)$$

$$\implies 7n = 2 \quad (7)$$

$$\implies n = \frac{2}{7} \quad (8)$$

now, by taking y

$$6 = \frac{10 - 8n}{n + 1} \quad (9)$$

$$\implies 10 - 8n = 6 + 6n \quad (10)$$

$$\implies 10 - 6 = 6n + 8n \quad (11)$$

$$\implies 4 = 14n \quad (12)$$

$$\implies n = \frac{2}{7} \quad (13)$$

Therefore, the ratio which divides A and B is 2:7.
